Interface Forms Directly into the EMR with Access's Image Portal

Create a Seamless Exchange Between Forms Management and Document Management Systems

Facilities that rely on paper forms face multiple challenges. To get forms completed in patient registration, on clinical floors and in other areas of the hospital into the electronic medical record (EMR), staff members spend hours scanning and indexing forms in the document management system. In addition to wasting time for the personnel who are scanning, this process delays the availability of key patient information. Data entry and indexing errors are common, leading to more manual effort to correct them.

At Access, we have a better solution: Image Portal.

As a complement to our industry-leading electronic forms management suite, Patient Flow System (PFS), Image Portal captures completed electronic forms, converts them into the desired image format and interfaces them directly to the document management system. They're then automatically linked to patient records in the health information system (HIS) for easy retrieval hospital-wide.

With Image Portal, your facility can:

Ensure that forms are immediately available to HIM, patient finance, clinical floors and other areas

Boost staff productivity by eliminating scanning, data entry and transporting forms between departments

Sidestep the errors of manual indexing and the redundant effort required to correct such mistakes

Increase data integrity and security

Create a fully paperless electronic forms management environment when using Image Portal with Access's e-Signature and/or Access Logical Ink tablet-based electronic charting solutions

Extend the value of your document management investment

Minimize the financial and environmental costs of printing and duplicating paper forms

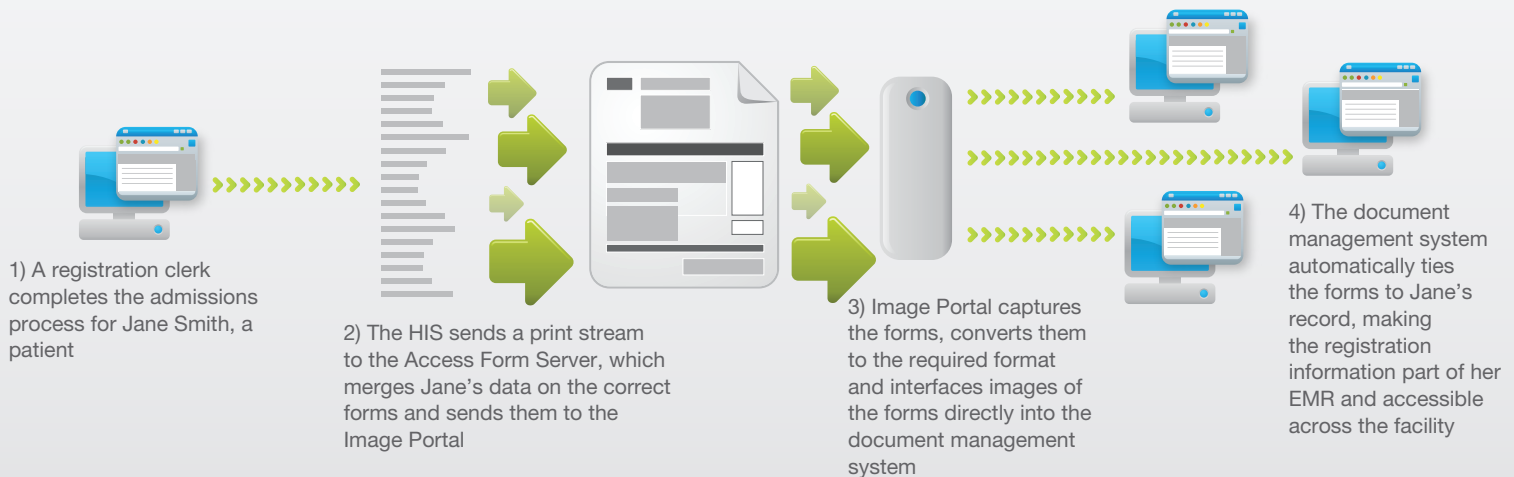

"Access's Image Portal solution has become a valuable component of our health information management process. Simply put, the Image Portal makes the process more efficient. It allows our resources to spend less time managing paper, and more time putting that information to good use for the benefit of our patients."

Ed Fisher

Norman Regional Medical Center

Customer Success with Image Portal

Hundreds of hospitals are creating time and cost savings using Access's Image Portal. Read on to learn about how Image Portal benefits Anderson Hospital and Norman Regional Medical Center.

Boosting Productivity at Anderson Hospital

"I did an evaluation of the medical records and business office face sheets processed in a four week period, and calculated that Access's Image Portal saved 75 hours of work time. That's because it ports forms directly into our document management system, instead of employees scanning and indexing manually."

Travis Hanson
Applications Analyst
Anderson Hospital

At Anderson Hospital in Illinois, admissions associates create face sheets for the business office and medical records department to process each patient's event. Previously, staff scanned these face sheets and manually linked them to the patients' records in Anderson's document management suite.

Now, Access's Image Portal sends these forms directly into the document management system, and indexes them automatically. This reduces manual effort, ensures staff members in the business office and medical records department have the information they need immediately and eliminates the wasted time and potential for errors associated with manual data entry.

Save Time and Improve Information Sharing with Access's Portals

In addition to the Image Portal, Access offers several other portal solutions that enable healthcare facilities to seamlessly exchange patient-focused and business information with other systems.

Fax Portal & E-mail Portal bridge the PFS system to the customer's fax and e-mail servers, enabling authorized staff members to send forms to appropriate parties, saving time and money on traditional delivery methods.

Associates send forms directly and securely to nursing stations, physicians' offices, HIM or insurance providers with just a single click.

Universal Document Portal (UDP) captures output from clinical monitoring devices such as EKG and fetal monitors and glucometers, converts it into the desired image format and interfaces it directly into the document management system, where the diagnostic-quality image is automatically tied to the patient's HIS record for easy retrieval anywhere in the hospital.

Saving Time and Money at Norman Regional Medical Center

"Access's Image Portal solution has become a valuable component of our health information management process. Simply put, the Image Portal makes the process more efficient. It allows our resources to spend less time managing paper, and more time putting that information to good use for the benefit of our patients."

VP & CIO
Norman Regional Medical Center

To improve information sharing across the hospital, Norman Regional Medical Center in Oklahoma is using Access's Image Portal, which interfaces forms directly into the Meditech Scan Archive (SCA) document management system, eliminating manual scanning.

As the forms are auto indexed, there's no need for time-consuming, error-prone data entry. Image Portal is part of a comprehensive electronic forms management project centered on Access's PFS, which saves the hospital \$380,000 annually.

Create a Seamless Forms Management Process

Your facility could apply Access's Image Portal to almost any form and document. Here are just a few examples:

- Registration packets
- Face sheets
- Nursing assessments
- Discharge summaries
- Pain assessments
- Emergency department documents
- MRI questionnaires
- Bedside consent
- Home care documents
- Pre-registration forms
- HIPAA privacy forms
- Patient questionnaires
- Fee sheets
- Super bills
- Consent to treat
- Progress notes
